

Front-end Developer

Are you interested in big data and food science?

And are you a skilled front-end developer with a knack for UX, then you are the one we are looking for. We have a team of best in class data scientists and developers, but we lack a person dedicated to creating the right front-end.

Scio+ is an ambitious young company working at the forefront of data science in the food production sector. We deliver key insights driven by data to customers around the globe, insights that help them improve business with a view of the full value chain.

To succeed in being a trusted partner for our customers we need more than just the right skills - we need the right people.

You should have an open and positive attitude to your colleagues and work and you have a desire to make an impact on the world. We think your academic background is a Master in Computer Science, but it is more important that you have the right competences for the job.

We expect:

- You play well with others and understand the value of team work
- You prefer to work in self-organising teams with little process overhead
- That open-ended ideas and concept is not too daunting for you to work with
- You have experience with multiple web technologies (we are currently using AngularJS)
- You can use your experiences to help us select the right technologies for the job
- You are fluent in CSS/HTML
- You are not afraid of creating graphical elements in Photoshop
- You know how to make a web-app for both mobile and desktop

We invite you to work with a team of the best minds in the field, a team that is using data science to raise the bar of what is possible in food production. We offer a flexible working arrangement with respect for a healthy work-life balance.

We are located in Agro Food Park in a newly renovated open office environment, where we are a part of the cluster of innovative food companies.

Food science is a global challenge

Feeding the ever-growing population is a global challenge, a challenge we only can solve if we are thinking food production in innovative new ways. Our contribution is to ensure that we can increase production yield, whilst not sacrificing the welfare of the animals. The results are better food, with less medication and reduced carbon footprint. Or as we say it:

Why make an app, when you can make a difference?

Want to know more? Please contact Chief Technology Officer, Lasse Lorenzen
